Summary : A cryptocurrency is a digital or ...If you're learning about investing in cryptocurrency for beginners then you should probably know about Ethereum. The next biggest coin, besides Bitcoin, is Ethereum. Ethereum is a pretty complex technology, but in short it allows people to share computing resources and developments across the blockchain network, so that you can build applications that don't require a central server or a central development team. Litecoins, Dogecoins, and Feathercoins, on the other hand, are three Scrypt-based cryptocurrencies that are the best cost-benefit for beginners. At the current value of Litecoin, a person might earn anywhere from 50 cents to 10 dollars per day using consumer level mining hardware.
