

Download Barry Levine Laboratory Manual

A blood alcohol level might be helpful in the office if the patient appears intoxicated but is denying alcohol abuse. A blood alcohol level in excess of 300 mg/dL, a blood alcohol level of greater than 150 mg/dL without gross evidence of intoxication, or a blood alcohol level of greater than 100 mg/dL upon routine examination indicates alcoholism with a high degree of reliability. Pneumonia is a leading infectious cause of hospitalization and death among adults in the United States, 1,2 with medical costs exceeding \$10 billion in 2011. 3 Routine administration of the ...
